No changes in this release.

[WorkZone Mass Dispatch 2021.1](#)

No changes in this release.

[WorkZone Mass Dispatch 2021.0](#)

No changes in this release.

[WorkZone Mass Dispatch 2020.3](#)

Save letters on existing or new recipient cases

You can now save dispatched letters on individual recipient cases. The recipient cases can either be existing cases that you specify in the recipient list or new cases that are created based on a case template and information that you specify on a new **Recipient cases** tab in the **Start mass dispatch** dialog box. See [Recipient list](#) and [Start a mass dispatch](#).

Custom sets of schema and data sheets for the Recipient list

You can add custom sets of schema and data sheets to your Excel workbook. For example, if your recipients are companies, you might want to create an inline custom set of schema and data sheet containing information about the company members. See [Recipient list](#).

Mass dispatch performance improvements (WorkZone Process2021.2 Hotfix 2)

With this hotfix release, WorkZone Mass Dispatch can send letters to up to 40,000 recipients in a mass dispatch.

Note that the dispatch time depends on your organization's hardware capacity and e-Boks. For example, it is possible to complete the actual dispatch of letters to 40,000 recipients within approximately 6 hours. This makes it possible to start a mass dispatch by the end of working hours and complete it before midnight.

Furthermore, you can expect that it takes an additional 10 hours until all receipts from e-Boks have been received and history documents are generated and saved in WorkZone. The Mass dispatch process has no influence on the time it takes for e-Boks to generate and send receipts. When WorkZone has received the receipts from e-Boks, the generation of history documents will start.

For more information about performance measures, please contact KMD WorkZone.

- To optimize the generation of validation reports and history documents, the documents are now in CSV format instead of PDF format. See [Validate the recipient list and History documents](#).
- Administrators can now configure how many letters to send in a batch using a new `BatchSize` parameter.

[WorkZone Mass Dispatch 2020.2](#)

This is the first release of WorkZone Mass Dispatch for production.

Important: The dispatch time depends on your organization's hardware capacity. In this first release, please note that it is recommended to mass dispatch to a maximum of 1000 recipients. The dispatch time for sending letters to 1000 recipients is approximately three hours.

[WorkZone Mass Dispatch 2020.1](#)

This is the first version of the guide.

Important: This version is not to be used in production. Please install and use it only for testing purposes and share your feedback with us. We expect the production version in the 2020.2 release.

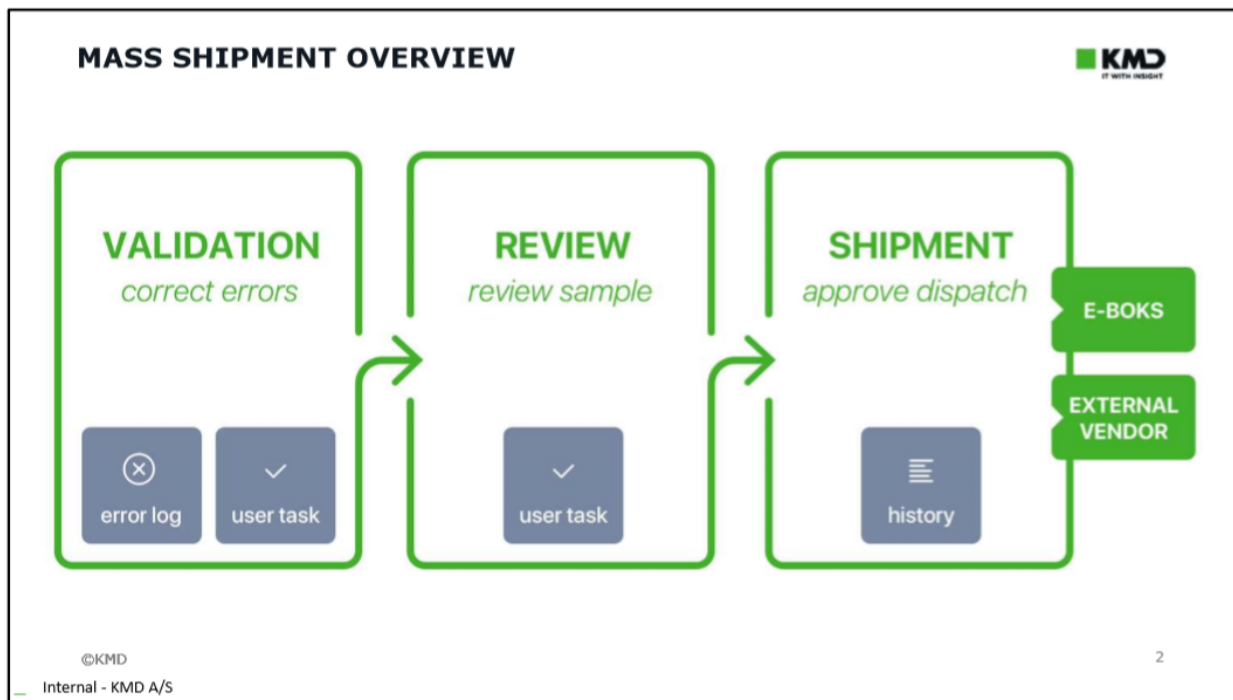

About WorkZone Mass Dispatch

Use WorkZone Mass Dispatch to send a large batch of letters to WorkZone contacts. Each letter will be populated with information that is relevant to a particular contact. The letters can be dispatched either via e-Boks or via local print.

You start a mass dispatch from a case that holds a list of recipients in an Excel sheet and the letter template in a Word document that will be used for the dispatch. Before the letter is mass dispatched, the recipient list is validated and you have the option to correct errors based on a validation report.

The WorkZone Mass Dispatch process consists of the following steps:

1. Create a case to start and manage the mass dispatch from. This case is now the dispatch case.
2. Create a recipient list and save it on the dispatch case.
3. Create a letter template with merge fields in Word and save it on the dispatch case.
4. Start a mass dispatch process from the **Process** menu in WorkZone Client.
5. WorkZone Mass Dispatch validates the recipient list, checks if there are errors, and notifies you if errors are found by sending a smarttask/smartmail to you as the process owner. The task contains the letter template, the recipient list, and a validation report. You can then correct the errors based on the error descriptions listed in the validation report.
6. When the recipient list is validated without any errors, a sample letter to one recipient is generated for you to review.
7. When you are satisfied with the content of the letter, you can start the mass dispatch of the letters to the recipients in the recipient list.

Recipient list

The recipient list is a Microsoft Excel workbook that contains a list of recipients and recipient details such as address information. The recipient list contains all WorkZone contacts that you want to send the letter to. See [Recipient list](#).

Letter template

The letter template is a Microsoft Word document that includes body text and merge fields. The merge fields will be populated with values when WorkZone Mass Dispatch merges the template with contact information from the recipient list. See [Letter template](#).

Start a process

When the recipient list and the letter template are ready, you can start the WorkZone Mass Dispatch process from the **Process** menu in WorkZone Client.

Prerequisite: To start the WorkZone Mass Dispatch process, you must have the MASSDISPATCH access code.

In the **Start mass dispatch** dialog box, you can select a recipient list and a letter template.

Before you can send the full dispatch of letters, you must validate the recipient list and review the letter template.

Validation

The validation verifies requirements for the recipient list. See [Validation](#). If the requirements are not met, you will receive a smarttask with a validation report that lists the errors. You can then correct the errors before moving on to the next step. After the correction, you can validate the recipient list again to ensure that it is composed properly. Alternatively, you can cancel the mass dispatch.

Approve

The next step is to review and approve a sample of the letter before generating the entire batch of letters. WorkZone Mass Dispatch generates a sample letter and creates an approval task. If the letter does not satisfy your expectations, you can edit it, and then repeat validation and get a new approval task with a new sample letter. See [Approve and send a mass dispatch](#).

Send

When you are satisfied with the letter, you are ready to send it to all the recipients on the recipient list as a mass dispatch.

Prerequisite: To send letters using WorkZone Mass Dispatch, you must have the **MASSDISPATCHSEND** access code.

At this stage, contact information from the recipient list is merged with the letter template. WorkZone Mass Dispatch generates a PDF version of the letter and sends the letter to each recipient in the recipient list. The letters can be delivered either via e-Boks, remote print, or via local print. When the dispatch is complete, WorkZone generates a history document for each individual dispatch as well as one history document for the whole mass dispatch.

Prepare a mass dispatch

To send letters using WorkZone Mass Dispatch, you must first create a case for the dispatch, a dispatch case. This case holds the recipient list and the letter template and this is the case you start the mass dispatch from.

Recipient list

To send letters using WorkZone Mass Dispatch, you must create a recipient list. Each contact in the list will receive the letter.

The recipient list is a Microsoft Excel workbook with a mandatory set of two sheets describing the recipients: a schema sheet and a data sheet.

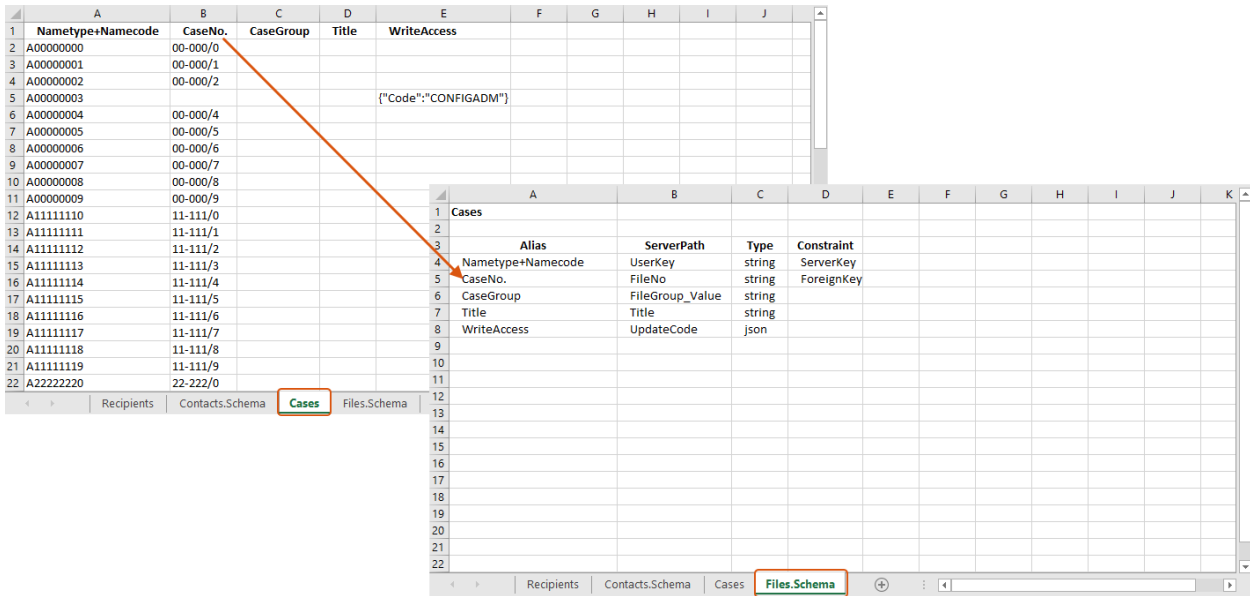

- **Contacts.Schema**—required name of the schema sheet. This sheet contains system information on the aliases specified in the data sheet or taken from the WorkZone Content Server database. The A1 cell must refer to the name of the data sheet.
- **Contacts**—the data sheet that you can name as you like. In the example below, it is named *Recipients*. The information from this sheet populates the letter template after you start the mass dispatch.

FirstName	LastName	MiddleName	Year	Casehandler	OrgPhone	OrgMail	AddressMain	AddressSuppl	Postcode
Ammie	Duke	Sheryl	2020	Mackenzie Parcell	(111)111-1111	support@tax.com

Berv	Ward								

Alias	ServerPath	Type	Constraint
Nametype+Namecode	UserKey	string	ServerKey
FirstName	Name1	string	Required
LastName	Name2	string	Required
MiddleName		string	
Year		DateTime	Required
Casehandler		string	Required
OrgPhone		string	Required
OrgMail		string	Required
AddressMain	AddressMain/Address1	string	Required
AddressSuppl	AddressMain/Address2	string	Required
Postcode	AddressMain/Postcode_Value	string	Required

If you want to save dispatched letters on individual cases per recipient, you can optionally add another set of schema and data sheet to the Microsoft Excel workbook:

- **Files.Schema**—required name of the schema sheet. This sheet declares the relation of cases and recipients for the mass dispatch, and contains system information on the aliases specified in the data sheet or taken from the WorkZone Content Server data-base. The A1 cell must refer to the name of the data sheet.
- **Cases**—you can name the data sheet as you like. This sheet declares the cases on which the dispatched letters will be stored.

The recipient cases can either be existing cases that you specify in the recipient list or new cases that are created based on a case template and information that you specify in the **Start mass dispatch** dialog box.

You can add more sets of schema and data sheets to your Excel workbook. For example, if your recipients are companies, you might want to create an inline custom set of schema and data sheet containing information about the company members. Your custom sets of schema and data sheets can be created the same way as the set used for saving dispatched letters on cases.

Contacts.Schema sheet

All strings on the **Contacts.Schema** tab are case-sensitive, except **Type**.

Example: This example shows the **Contacts.Schema** tab of a recipient list that contains basic personal information:

	A	B	C	D	E
1	Recipients				
2					
3	Alias	ServerPath	Type	Constraint	
4	Nametype+Namecode	UserKey	string	ServerKey	
5	FirstName	Name1	string	Required	
6	LastName	Name2	string	Required	
7	MiddleName		string		
8	Year		DateTime	Required	
9	Casehandler		string	Required	
10	OrgPhone		string	Required	
11	OrgMail		string	Required	
12	AddressMain	AddressMain/Address1	string	Required	
13	AddressSuppl	AddressMain/Address2	string		
14	Postcode	AddressMain/Postcode_Value	string	Required	
15					

The A1 cell refers to the name of the **Contacts** sheet. WorkZone Mass Dispatch requires a fixed structure of the recipient list to be able to process it, so you must define fields in this sheet as described in the table below.

Field name

Alias The field name used on the **Contacts** tab and in letter templates.

ServerPath The path to the field values in WorkZone Content Server. If this field is empty, the information will be pulled not from the WorkZone Content Server but from the **Contacts** sheet.

Tip: You can use WorkZone QueryBuilder to view available fields and their paths.

Type This field is not case-sensitive. Enter one of these types:

- bool
- byte
- uint
- long

Field name

- sbyte
- char
- decimal
- double
- float
- int
- ulong
- short
- ushort
- string
- DateTime

Constraint Enter **Required** if the field values cannot be empty.

Enter **ServerKey** in the field that will be used as key.

Note: The DateTime field type is used for defining both date and time. In the letter template, change formatting in the merge field of the DateTime type to get a desired format of the date or time. See more in Tips for formatting date, currency, and number.

Contacts sheet

This **Contacts** sheet contains the WorkZone contacts that will receive the letters using WorkZone Mass Dispatch and the information regarding these contacts. In this sheet, columns represent the fields that are defined on the **Contacts.Schema** sheet, and rows represent values.

Note: The contacts that you add to the recipient list must exist as WorkZone contacts for the mass dispatch process to send to these contacts. The validation will detect if the contacts exist. If a contact does not exist, the validation will add an error in the validation report. You can then create the missing contacts in WorkZone or you can choose to continue the mass dispatch process without sending to these contacts.

Example: Contacts sheet. In this example it is named *Recipients*.

	B	C	D	E	F	G	H	I	J	K
1	FirstName	LastName	MiddleName	Year	Casehandler	OrgPhone	OrgMail	AddressMain	AddressSuppl	Postcode
2	Ammie	Duke	Sheryl	2020	Mackenzie Parcell	(111)111-1111	support@tax.com			
3	Willis	Travis		2020	Emilie Tyree	(222)222-2222	support@tax.com			
4	Abdul	Middleton		2020	Brice Boehmer	(333)333-3333	support@tax.com			
5	Laquanda	Finley		2020	Brice Boehmer	(333)333-3333	support@tax.com

19	Mittie	Waller		2020	Brice Boehmer	(333)333-3333	support@tax.com			
20	Dusty	Payne		2020	Brice Boehmer	(333)333-3333	support@tax.com			
21	Ella	Rowe		2020	Mackenzie Parcell	(111)111-1111	support@tax.com			
22	Lavonda	Small	Asley	2020	Brice Boehmer	(333)333-3333	support@tax.com			
23	Inocencia	Jensen		2020	Emilie Tyree	(222)222-2222	support@tax.com			
24	Corrina	Chan		2020	Emilie Tyree	(222)222-2222	support@tax.com			
25	Annice	Mercado		2020	Brice Boehmer	(333)333-3333	support@tax.com			
26	Berv	Ward		2020	Mackenzie Parcell	(111)111-1111	support@tax.com			

Note: If a cell is empty and the server path is defined for the alias, the value will be taken from WorkZone Content Server. In the example above, the values for the *AddressMain*, *AddressSuppl*, and *ZIPcode* aliases will be populated from WorkZone Content Server.

Files.Schema sheet

The **Files.Schema** sheet is used to declare the relation of cases to the mass dispatch recipients.

	A	B	C	D	E	F	G	H	I	J	K
1	Cases										
2											
3	Alias	ServerPath	Type	Constraint							
4	Nametype+Namecode	UserKey	string	ServerKey							
5	CaseNo.	FileNo	string	ForeignKey							
6	CaseGroup	FileGroup_Value	string								
7	Title	Title	string								
8	WriteAccess	UpdateCode	json								
9											
10											
11											
12											
13											
14											
15											
16											
17											
18											
19											
20											
21											
22											

The A1 cell refers to the name of the data sheet (in our example, **Cases** sheet). WorkZone Mass Dispatch requires a fixed structure of the fields to be able to process them, so you must define fields in this sheet as described in the table below.

Field name

Alias The field name used on the **Cases** sheet.

ServerPath The path to the field values in WorkZone Content Server.

Tip: You can use WorkZone QueryBuilder to view available fields and their paths.

Type This field is not case-sensitive. Enter one of these types:

- bool
- uint
- byte
- long
- sbyte
- ulong
- char
- short
- decimal
- ushort

Field name

- double
- float
- int
- string
- DateTime
- json

Constraint Enter **ServerKey** in the field that will be used as a Contact key.

Enter **ForeignKey** in the field that points out the existing cases. In the example above, the cases with the numbers filled in the **CaseNo.** field on the **Cases** sheet will be used to store the documents that are shipped.

Fields with no constraints are used to create the new cases.

Cases sheet

The **Cases** sheet is a data sheet that contains information required to find or create cases where the shipped letters are stored. The **Cases** sheet can only contain recipients that are also on the **Contacts** sheet.

In the **Cases** sheet, columns represent the fields that are defined on the **File.Schema** sheet, and rows represent values. The dispatched letters will be saved on the existing cases specified for the recipients. If a case number is not specified, a letter will be saved on a new case or on a dispatch case depending on information that you specify in the **Start mass dispatch** dialog box.

	A	B	C	D	E	F	G	H	I	J
1	Nametype+Namecode	CaseNo.	CaseGroup	Title	WriteAccess					
2	A0000000	00-000/0								
3	A0000001	00-000/1								
4	A0000002	00-000/2								
5	A0000003				{"Code": "CONFIGADM"}					
6	A0000004	00-000/4								
7	A0000005	00-000/5								
8	A0000006	00-000/6								
9	A0000007	00-000/7								
10	A0000008	00-000/8								
11	A0000009	00-000/9								
12	A11111110	11-111/0								
13	A11111111	11-111/1								
14	A11111112	11-111/2								
15	A11111113	11-111/3								
16	A11111114	11-111/4								
17	A11111115	11-111/5								
18	A11111116	11-111/6								
19	A11111117	11-111/7								
20	A11111118	11-111/8								
21	A11111119	11-111/9								
22	A22222220	22-222/0								

Note: If a cell is empty and the server path is defined for the alias, the value will be taken from the template case specified in the **Recipient cases** tab of the **Start mass dispatch** dialog.

If a recipient is specified on the **Contacts** sheet but is not on the **Cases** sheet, new case for such recipient will be created if **Create recipient cases** setting is selected in the **WorkZone Client**.

Validation

To ensure a successful mass dispatch, the following requirements to the recipient list must be met:

- All fields are strictly aligned between the schema and data sheets. For example, all fields in the **Contacts.Schema** sheet must be present in the **Contacts** sheet, and all fields in **Contacts** sheet must be defined in the **Contacts.Schema** sheet.
- Alias and type must be filled in for each field.
- Each field has a unique alias and a unique server path.
- Server paths only contain letters, numbers, underscores, and slashes.
- Only one field is defined as **ServerKey**. Mind that the key values must be unique in **WorkZone**.

- If there is a defined **ServerKey** in the **Cases** data sheet, then it should correspond to the **ServerKey** in the **Contacts** data sheet.

Letter template

A letter template is a Microsoft Word document that you want to send to recipients using WorkZone Mass Dispatch. The template includes the mandatory opening and closing merge fields and the body of the letter with custom merge fields. The custom merge fields will be populated with values when the template is merged with the contact information from the recipient list. The values represent information such as name, address, and other data for each particular contact.

Important: Apart from the **ServerKey** field, you must add all fields defined on the schema sheet (for example, **Contacts.Schema**) to the template. The **ServerKey** field can be skipped. If you no longer need a specific field, remove it from the schema sheet.

The screenshot displays a Microsoft Word document with a letter template. The template contains several merge fields: { MERGEFIELD TableStart:Recipients }, { MERGEFIELD FirstName } { MERGEFIELD MiddleName } { MERGEFIELD LastName }, { MERGEFIELD AddressMain }, { MERGEFIELD Postcode }, Dear { MERGEFIELD FirstName } { MERGEFIELD MiddleName } { MERGEFIELD LastName }, Enclosed is your { MERGEFIELD Year } Tax Return. Please keep a copy of the return with your records. If you have any questions, please call us., Regards, { MERGEFIELD Casehandler }, { MERGEFIELD OrgPhone }, { MERGEFIELD OrgMail }, and { MERGEFIELD TableEnd:Recipients }. A preview window on the right shows the rendered letter for Ammie Sheryl Duke at Temple str 1, 01234. The preview includes the salutation 'Dear Ammie Sheryl Duke,' the body text 'Enclosed is your 2020 Tax Return. Please keep a copy of the return with your records. If you have any questions, please call us.', and the sign-off 'Regards, Mackenzie Parcell (111)111-1111 support@tax.com'. The status bar at the bottom left indicates 'Page 1 of 1', '39 words', and 'English (United States)'.

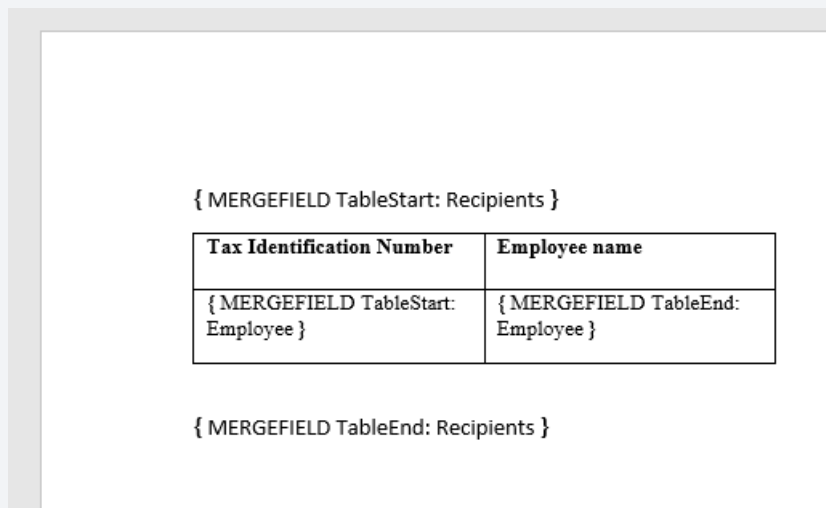

Create a letter template

The structure of merge fields is the following: in curly braces, MERGEFIELD and then the alias of the field, for example, { MERGEFIELD FirstName }.

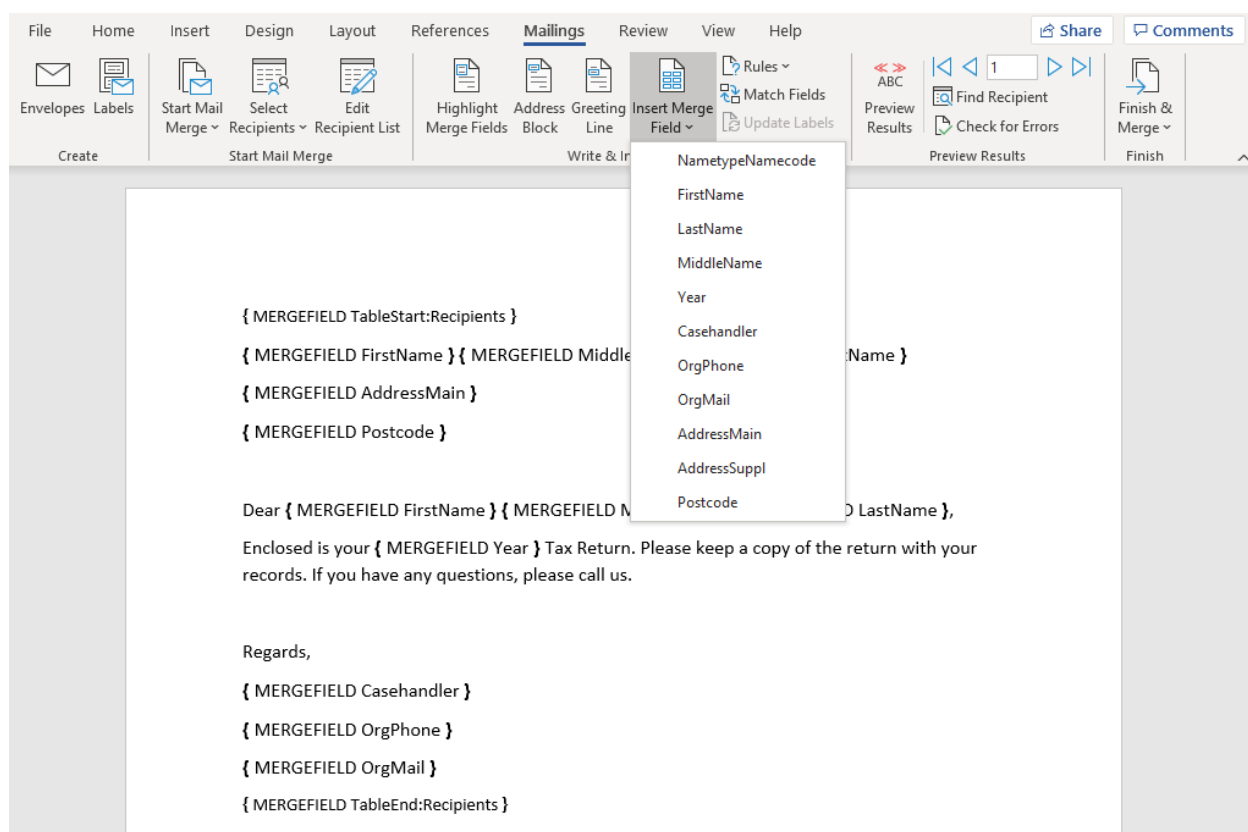

1. Press **Alt + F9** to view merge fields in curly braces.
2. Type the main opening and closing merge fields of your letter template. They will be {MERGEFIELD TableStart:Recipients } and {MERGEFIELD TableEnd:Recipients }, respectively, if the name of the Microsoft Excel data sheet containing the contacts is called *Recipients*. The body of the letter must be placed between these two fields.

Important: If you have custom sets of schema and data sheets, you will need to enter other sets of opening and closing merge fields inside the main ones.

3. Connect to your recipient list in Excel. Go to **Mailings > Select Recipients > Use an Existing List...** > select the Excel file with the recipient list > select the **Contacts** tab and leave the **First row of data contains column headers** option checked > click **OK**.
4. Type the body of your letter. Use **Insert Merge Field** of the **Mailings** tab, to add a merge field when you need to include the information specified in the recipient list.

Tip: You can preview your letter by selecting **Preview Results** in the **Mailings** tab in Microsoft Word.

5. Save your changes.

Tips for formatting date, currency, and number

Use a switch in Microsoft Word to format the results of the merge field. You can change the date, time, currency, and number format in your letter template to whatever you like.

1. Select the merge field you want to change.
2. Press **Alt + F9** to view the field coding in Microsoft Word. The field you have selected should now look like this: { MERGEFIELD Date }.
3. Add the formatting data to the merge field using the numeric picture switch (\#) for currency and number fields or the date-time picture switch (\@) for date fields. See some examples below.
4. Right-click the merge field and select **Update Field**.

Date field code with picture switch and format specifiers	Displayed in the letter
{ MERGEFIELD Date \@ "MMMM d, yyyy" }	March 29, 2021
{ MERGEFIELD Date \@ "dd/MMM/yy" }	29/Mar/21
{ MERGEFIELD Date \@ "d MMMM yyyy" }	29 March 2021

See more about date and time format specifiers in the [Microsoft documentation](#).

Numeric field code with picture switch and format specifiers	Displayed in the letter
{ MERGEFIELD Amount \# \$,0.00 }	\$1220.00
{ MERGEFIELD Amount \# 0 }	1220
{ MERGEFIELD Amount \# \$,0 }	\$1,220

See more about the numeric format specifiers in the [Microsoft documentation](#).

Start a mass dispatch

You start and send a mass dispatch from WorkZone Client. The mass dispatch process consists of the following steps:

Start a mass dispatch	21
Error handling	36

Start a mass dispatch

You start and send a mass dispatch from WorkZone Client. The mass dispatch process consists of the three steps:

1. Start a mass dispatch
2. Validate the recipient list
3. Approve and send a mass dispatch

Prerequisite:

- You must be assigned the **MASSDISPATCH** access code to start a mass dispatch process.
- You must be assigned the **MASSDISPATCHSEND** access code to be able to send a mass dispatch.
- You have prepared a [Recipient list](#) and a [Letter template](#) and saved them on a case. This case is now the dispatch case, where you manage the mass dispatch.

Start a mass dispatch

1. In WorkZone Client, open the dispatch case that the recipient list and the letter template are saved on.
2. Click **Process > Start Mass Dispatch**.

3. Enter a title of the mass dispatch process in the **Title** field. The title will be used as the name of the Mass dispatch process and as the title of the email that is sent to the recipient's inbox in e-Boks. By default, the title of the current case is used. When you select a letter, the title changes to the name of the letter automatically. You can change the title.
4. In the **Recipient list** field, select the recipient list you want to use. Select the Excel workbook that holds the recipients you want to send the letter to. See [Recipient list](#).
5. In the **Letter** field, select the letter template you want to use.
6. In the **Excluded CPR status codes** field, select the status codes that you want to exclude from the dispatch, for example, **80, Inactive, emigrated** or **90, Inactive, dead**.

For example, if you select **80, Inactive, emigrated**, recipients with this status code will not receive a letter even if they are included in the recipient list. The validation report will list the recipients that have been excluded from the mass dispatch because of their status code.

7. Select a dispatch sequence in the **Dispatch sequence** field. The dispatch sequence defines the channels that will be used in a prioritized order.

Important: You must select a dispatch sequence with e-Boks as the first dispatcher.

If, for example, you select **Send by digital post or else remote print or else local print**, the Mass dispatch process will try to send the message to e-Boks first. If, for some reason, the dispatch is not successful, the message will be sent to remote print. If this dispatch is also unsuccessful, the letter will be sent to you in a smartmail for you to print locally.

Note:

- If you see the message *"The recipient with id <CPR number> is not subscribing to the material ID <material ID>"*?, you are trying to send the message to a recipient who is not registered as an e-Boks user. See [SmartPost FAQ](#) to solve this issue.
- If local print is part of the dispatch sequence, you can potentially generate a large number of local print smartmails.

8. Select a material in the **e-Boks material** field. The materials on the list are defined by your organization and e-Boks. For example, you may be able to select a material that enables the recipients to reply to the message that you are about to send.
9. Select the **Send to case handler** check box, if you want the case handler to review and approve the mass dispatch. Note that the case handler must have the **MASSDISPATCHSEND** access code to review and approve a mass dispatch. If you leave the check box cleared, you will, as the process owner be the approver of the mass dispatch.

The screenshot shows a 'Start mass dispatch' dialog box with the 'Recipient cases' tab selected. The 'Title' field contains 'Letter'. The 'Recipient list' dropdown shows 'D-151, Recipient list, 11/06/2020'. The 'Letter' dropdown shows 'D-150, Letter, 11/06/2020'. The 'Excluded CPR status codes' section has a search bar with the text 'Inaktiv, udrejst'. The 'Dispatch sequence' dropdown is set to 'Send by digital mail else remote print else local print'. The 'e-Boks material' dropdown is set to 'Material with reply option'. There is an unchecked checkbox for 'Send to case handler for approval' and a 'Help' link. 'Start' and 'Cancel' buttons are located at the bottom right.

10. Click the **Recipient cases** tab if you want to create a new case for each of the recipients in the mass dispatch and save the letter on the new cases. If you do not want to create new recipient cases, you can skip the steps 9-10.
11. On the **Recipient cases** tab, select the **Create recipient cases** check box, and fill in required information about the case title, case group, and case template you want to base the creation of new recipient cases on.

Start mass dispatch

General Recipient cases

Create recipient cases

Case title template
 {name1} {name2} — {namecode}

Case group
 03, Administrative regulations

Case template
 20-TEMPLATES/1, MD case template for new recipients, TESTADMIN

[Help](#)

Start Cancel

When recipient cases are created, they will get the case title and the case group that you have specified on the **Recipient cases** tab but also other columns that are specified in the Files.Schema sheet. You can, for example, specify write access as shown in the example in the Files.Schema sheet sheet.

New cases will not be created for the recipients that have references to existing cases in the Cases sheet (using a foreign key column).

Case title template Specify how you want the case titles of the new recipient cases to be created. You can use the columns names from the **Contacts.Schema sheet** to define the title template. Specify the column names in curly brackets.

{name1} {name2} — {namecode}

Results in, for example, the case title: Amy Duke – 210206-8621

Note: The title that you specify in the **Case title template** field over-

writes the title that is specified in the Cases sheet.

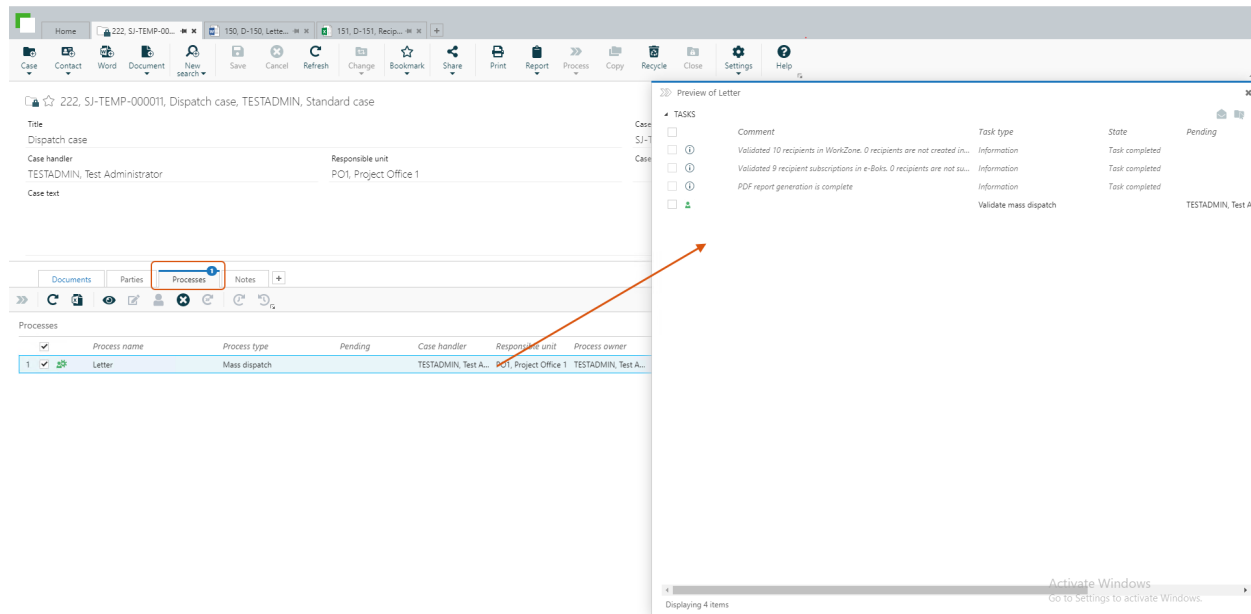

Case group Select the case group you want to apply to new recipient cases. Other case data are either taken from the recipient list or from the case template that you select in the **Case template** field.

Note: The case group that you specify in the **Case group** field overwrites the case group that is specified in the Cases sheet.

Case template Select a case template you want to use as template for new recipient cases.

Note: The case that you use as the case template must have the case group **TEMPLATES, Template case group** to be available for selection in the **Case template** field.

12. Click **Start** to start the mass dispatch. The validation of the recipient list will start.
13. Click the **Processes** tab and double-click the process to open it in the preview pane where you can follow the progress and open tasks that are related to the process.

14. If the validation of the recipient list fails, you will receive a **Validate mass dispatch** task, see [Validate the recipient list](#). If the validation is successful, the mass dispatch process continues directly to the approval step and you will, as the process owner, receive an **Approve mass dispatch** task. See [Approve and send a mass dispatch](#).

Validate the recipient list

When you click **Start** in the **Start mass dispatch** dialog box, the Mass dispatch process starts validating the recipients in the recipient list. If there are errors in the recipient list, you as the process owner will receive a **Validate mass dispatch** smarttask/smartmail.

1. Open the task from the preview pane in WorkZone Client or as a smartmail in Outlook similarly to other processes. The task contains the letter template, the

recipient list, and a validation report.

Validate mass dispatch

A mass dispatch has been started and the recipient list has been validated. The attached validation report shows if the recipient list contains errors. You can correct any errors based on the validation report and revalidate the list before you move on with the mass dispatch.

- Click Repeat to repeat the validation after you have corrected errors.
- Click Cancel to cancel mass dispatch and delete the validation report.
- Click Accept to accept the recipient list and the letter template and send a sample letter for approval before generating and sending all letters.

Accept

2. In the smarttask/smartmail, you have the following options:

- Click **Repeat** if you want to repeat the validation after you have corrected errors in the recipient list. You can base your corrections on the error descriptions listed in the validation report. You can repeat this step until you are satisfied with the recipient list.
- Click **Cancel** to cancel the mass dispatch and delete the validation report from the dispatch case.

- Click **Accept** to accept the content of the recipient list and move on to the approval of the mass dispatch.

For information about working with tasks, see [Work with tasks](#) in the WorkZone Process User Guide.

Correct errors in the recipient list

1. In the **Validate mass dispatch** task, click the validation report to open it.
2. Preview or open the report. The report lists the recipients that do not fulfill the requirements for the recipient list and an error description next to the recipients.

	RecipientCode,ValidationError
1	RecipientCode,ValidationError
2	,The contact C220306-8630 has duplicates.
3	,The contact C210206-8621 was not found in WorkZone.
4	,The contact C260206-8636 was not found in WorkZone.
5	,The contact C271106-8689 was not found in WorkZone.
6	,The contact V37130680 was not found in WorkZone.
7	,The contact J35020683 was not found in WorkZone.
8	,The contact J30110684 was not found in WorkZone.
9	,The contact C250806-8665 was not found in WorkZone.
10	,The contact C280806-8616 was not found in WorkZone.
11	,The contact V36010681 was not found in WorkZone.

The report lists all errors in the recipient list. Examples of errors may be:

- Requirements to the structure of the recipient list are not fulfilled. Check and correct errors in the Excel sheet based on the error messages listed in the validation report. See Recipient list.
- Contacts in the recipient list do not exist as WorkZone contacts.
- Some required fields in the recipient list do not have values in WorkZone. In this case, you can either remove **Required** from the field in the recipient list if it is not required information, or you can add the missing information to the contacts in WorkZone.

For a list of errors and possible solutions, see Error handling.

3. Click **Repeat** in the **Validate mass dispatch** task to repeat the validation until you are satisfied with the recipient list.
4. Click **Accept** when you are satisfied with the recipient list and ready to proceed with the mass dispatch.

When you click **Accept**, a sample letter is generated based on the letter template and one recipient from the recipient list. As the process owner you will receive an **Approve mass dispatch** smarttask/smartmail. See Approve and send a mass dispatch.

Correct errors in the letter template

If there are errors in the letter template, the dispatch will fail and you will receive a **Mass dispatch failed** task/smartmail with the error.

Done

If the letter template does not contain the same fields as the fields that are defined in the recipient list, you can either add or remove the fields from the letter template in Microsoft Word or remove the fields from the recipient list. The fields must match.

1. Click **Done** to close the **Mass dispatch failed** task. The mass dispatch will be canceled.
2. Correct the errors in the template and start the Mass dispatch process again.

Approve and send a mass dispatch

As the process owner you will receive an **Approve mass dispatch** task/smartmail when the recipient list is validated successfully and there are no errors in the letter template.

1. Open the task from the preview pane in WorkZone Client or as a smartmail in Outlook similarly to other processes. The task contains a sample letter , the recipient list, and the letter template.

Approve and send letters

The attached letter is ready for mass dispatch. Please review the sample letter and select an appropriate action. Your action applies to the entire dispatch.

- Click Approve to approve and execute the mass dispatch. All letters will be generated and sent. When the mass dispatch process is completed, any unsent letters are left on the case for you to print locally, send, and register.
- Click Repeat if you cannot approve the sample message and want to make changes and run the validation once more.
- Click Cancel to cancel the mass dispatch and delete all letters.
- Click Forward if you want to forward the sample letter to another employee for approval. Note that the employee must have the necessary rights to send the mass dispatch.

Approve

Repeat

Cancel

Forward

2. In the task, you have the following options:

- Click **Approve** if you are satisfied with the sample letter and want to start dispatching the letters.
- Click **Repeat** if you made corrections to the sample letter or the recipient list. The validation is repeated and you will receive a new approval task with a new sample letter.
- Click **Cancel** to cancel the mass dispatch. All documents that have been generated are deleted from the dispatch case.

- Click **Forward** if you want to forward the approval to another user.

Note: If the contact information is updated after you have approved a mass dispatch, the updated contact information will not be merged with the letter. You need to execute the mass dispatch validation process again to use the latest updated information.

What happens after approval?

When you approve the mass dispatch, WorkZone creates the letters and merges data in to the merge fields in the letters. WorkZone sends the letters to e-Boks. When e-Boks has dispatched all the letters, receipts are returned to WorkZone and History documents are generated. The generated letters and history documents are saved on the dispatch case or on individual recipient cases if you have specified existing cases in the recipient list and/or defined that new cases are created based on the options on the **Recipient cases** tab in the **Start mass dispatch** dialog box.

Note: If e-Boks returns an error in the receipt, the error will be handled according to the same rules as configured for SmartPost. See [e-Boks errors](#) in the WorkZone Process Administrator Guide.

Save letters on the dispatch case

If you do not specify a recipient case for each of the recipients in the recipient list, the letters will be saved on the dispatch case together with a Mass dispatch history document for the entire dispatch and history documents for each of the dispatches. The individual history document is saved as a supplementary document on the letter document. See History documents.

Save letters on recipient cases

In the Cases sheet in the recipient list, you can specify a recipient case for each of the recipients or you can specify individual field values for case creation. Creation of new cases

requires that you have you have selected the **Create recipient cases** check box and have filled in the options on the **Recipient cases** tab in the **Start mass dispatch** dialog box, see the steps 10-11.

Depending on how the case sheet in recipient list is defined and your settings on the **Recipient cases** tab when you started the mass dispatch, the following happens:

- If there is no case specified in the recipient list, and you have selected the **Create recipient cases** check box and specified the options for new recipient cases on the **Recipient cases** tab, the letters and history documents will be saved on newly created cases. See the steps 10-11 under Start a mass dispatch.
- If a case is specified for each recipient in the recipient list and the cases exist, the letters and history documents will be saved on the specified cases. See Cases sheet.
- If a case is specified but it does not exist in WorkZone, the validation will generate an error for the recipient which will be shown in the validation report.

History documents

When a mass dispatch process is complete, WorkZone generates one history document for the entire dispatch and one history document for each individual dispatch. The mass dispatch history documents are documents that summarize the actions during the mass dispatch process. The history documents are in CSV format. You can open the history documents in Excel to view information about the dispatches. If needed save the CSV file as an Excel workbook to process it further in Excel.

The history document for the entire mass dispatch includes a list of the recipients with information about the individual dispatches.

Example: History document for the complete mass dispatch

	A	B	C	D	E	F	G	H	I	J	K	L	M
1	RecipientCode	EboksSubscriber	RecordKey_Value	ExternalId	ShipmentDate	ReceiptDate	ShipmentState	Summary	ShipmentError				
2	210206-8621	True	72,004435637359301173200002	17-09-2020	07:01:58	17-09-2020	07:03:16	Completed					
3	271106-8689	True	73,004435637359301173200005	17-09-2020	07:01:58	17-09-2020	07:03:16	Completed					
4	250806-8665	True	74,004435637359301173200001	17-09-2020	07:01:58	17-09-2020	07:03:16	Completed					
5	220306-8630	True	75,004435637359301173200004	17-09-2020	07:01:58	17-09-2020	07:03:16	Completed					
6	280806-8616	True	76,004435637359301173200000	17-09-2020	07:01:58	17-09-2020	07:03:16	Completed					
7	260206-8636	True	77,004435637359301173200003	17-09-2020	07:01:58	17-09-2020	07:03:16	Completed					

The history documents contain the following information:

Field	Description
RecipientCode	The ID of the recipient, for example a CPR or CVR number.
EboksSubscriber	If the value is True, the recipient is registered as an e-Boks user.
RecordKey_Value	The document number of the letter that was sent to the recipient.
ExternalId	External ID, which is used to track the delivery of the dispatch. If the message is sent through e-Boks and the field contains an ID, it means that the dispatch is completed and that e-Boks has acknowledged the receipt of the message.
ShipmentDate	The dispatch date and time of the letter.
ReceiptDate	The date and time that the letter was received by e-Boks and e-Boks has generated a receipt.
ShipmentState_Summary	Shows the status of the dispatch that was sent to each recipient. If the dispatch was successful, the status will be Completed . If it has failed, an error code and a description will be shown in the Dispatch Error field.
ShipmentError	An error code and a description will be shown next to each recipient who did not receive the letter.

Save letters on the dispatch case

If you have decided to save all the generated letters on the dispatch case, the history document for each dispatch will be saved as a supplementary document on the letter as shown below. The history document for the entire dispatch is also saved on the dispatch case.

The screenshot shows the WorkZone interface. At the top, there is a navigation bar with icons for Case, Contact, Word, Document, New search, Save, Cancel, Refresh, Change, Explore, Bookmark, Share, Print, Report, Process, Copy, Recycle, Close, Settings, and Help. Below this, a case summary is displayed for '20-09/2, Mass dispatch case, TESTADMIN, Standard case'. The summary includes fields for Title, Case group, Bacteria and virus, Labelling, Case handler, Responsible unit, Case text, and Case type.

Below the case summary, there is a 'Documents' section with a table listing documents. The table has columns for Title, Docu..., Letter date, Document type, and Reply de... The documents listed are:

	Title	Docu...	Letter date	Document type	Reply de...
1	C210206-8621	72		DOK, Document	
2	C220306-8630	75		DOK, Document	
82	Mass dispatch: Mass dispatch history per recipient (17-09-2020)				
3	C250806-8665	74		DOK, Document	
4	C260206-8636	77		DOK, Document	
5	C271106-8689	73		DOK, Document	
6	C280806-8616	76		DOK, Document	
7	Mass dispatch: Mass dispatch history (17-0...	78	17/09/2020	PROHIST, History	
8	WZMD_Template	59	16/09/2020	DOK, Document	
9	WZMD_ValidContacts	61	16/09/2020	DOK, Document	

Save letters on recipient cases

If you have decided to save the generated letters on individual recipient cases, the history document for each dispatch is saved on the recipient case as a supplementary document to the letter. The history document for the entire dispatch is saved on the dispatch case.

Error handling

WorkZone validates the mass dispatch during the different steps of the process and error messages are shown in the validation report and in the **Mass dispatch failed** task/smartmail.

The table below lists the errors grouped by type of error.

- WorkZone
- Recipient list
- Letter template
- e-Boks

<p>The following mappings are missing in letter template: {0}.</p>	<p>Følgende tilknytninger mangler i brevskaelonen: {0}.</p>	<p>The recipient list contains mappings on the Contacts.schema sheet that are not used in the letter template. The fields in the recipient list and in the letter template must be identical.</p>
<p>e-Boks</p>		
<p>The contact {0} is not registered as an e-Boks user.</p>	<p>Kontakten {0} er ikke registreret som e-Boks bruger.</p>	<p>The recipient is not registered as an e-Boks user. The Mass dispatch process will try to send the letter using the next dispatcher in dispatch sequence.</p>

Configure WorkZone Mass Dispatch

Note: This topic is targeted at WorkZone administrators who will configure WorkZone Mass Dispatch.

Prerequisite:

- SmartPost must be activated and configured.
- An e-Boks dispatcher that is configured to use the Digital Post 2 must exist.

See [Configure dispatchers](#) in the WorkZone Process Administrator Guide.

You configure Mass dispatch in WorkZone Configurator.

1. In WorkZone Configurator, go to **Process > Processes**.
2. Point to the **Mass dispatch** process.
3. Click  **Edit process parameters**.
4. Enter values for the parameters.

Some of the Mass dispatch parameters are similar to SmartPost process parameters.

Parameter	Default	Description
SPDocumentSource		Select the origin of the created SmartPost message. The possible settings correspond to the entries in the custom domain ACTOPR, for example SP, SmartPost, DP, Digital Post, and so on. The organization must provide this information. The setting is shown on the document in

Parameter	Default	Description
		the Origin field in WorkZone Client.
MaxCombinedMessageLength	10485760 (10 MB)	<p>When a user starts a Mass dispatch process, the Mass dispatch process calculates an estimated size of each of the messages sent to the recipients. Before the Mass dispatch process continues the process, the estimated size is compared with the MaxCombinedMessageLength setting. If the estimated size exceeds the specified value, the user is asked to reduce the size of the documents and then try to send the message again.</p> <p>The reason for this is that large documents may cause the Workflow Host to run out of memory later in the flow, which causes workflows to be terminated without the user being notified. Generally, the default value is used.</p>
DefaultMaterialId		<p>The e-Boks material that will be selected by default in the Start mass dispatch dialog box.</p> <p>To configure e-Boks materials, click Process > E-boks material. See e-Configure e-Boks materials in the WorkZone Process</p>

Parameter	Default	Description
		<p>Administrator Guide and e-Boks materials in the WorkZone Configurator Administrator Guide.</p> <hr/> <p>DefaultDispatcherSequenceId</p> <p>The default dispatch sequence that will be selected by default in the Startmass dispatch dialog box.</p> <div data-bbox="949 674 1417 954" style="border: 1px solid #ccc; padding: 10px; margin: 10px 0;"> <p>Important: The selected dispatch sequence must have e-Boks as the first dispatcher.</p> </div> <p>To configure dispatch sequences, click Process > Dispatch sequences. See Configure Dispatch Sequences in the WorkZone Process Administrator Guide and Dispatch sequences in the WorkZone Configurator Administrator Guide.</p> <div data-bbox="949 1429 1417 1756" style="border: 1px solid #ccc; padding: 10px; margin: 10px 0;"> <p>Verify this value after successful installation. After installation, the dispatch sequences may have been renumbered.</p> </div>
DefaultRemotePrintTypeId		<p>The print type that will be selected by default in the Startmass dispatch dialog box.</p>

Parameter	Default	Description
		To create or reconfigure print types, click Process > Print types . See Configure print types in the WorkZone Process Administrator Guide and Print types in the WorkZone ConfiguratorAdministrator Guide.
ReportId		Select the report you want to use for the history document.
ValidationReportId		Select the report you want to use for the validation report.
RecipientReportId		Select the report you want to use for the recipient report.
RecordType	PROHIST	The document type of the history document that is generated by the Mass dispatch process.
RecordState		The document state of the history document that is generated by the Mass dispatch process.
TitleTemplate	{0}: {1} {2}	A template that is used to create the title of the history document. By default, the template has placeholders for the process type {0}, the process title {1}, and a date stamp {2}.
ValidationProperty		Select the custom document field that holds the values.
ValidationValues		Specify which custom document values are allowed. Users will

Parameter	Default	Description
		<p>only be able to select documents (letter document and attachments) with these values in the Start mass dispatch dialog box.</p>
DocClassificationThresHold		<p>The maximum document classification that is allowed to be used with the Mass dispatch process. Documents with higher classifications than specified for this parameter will not be available for selection in the Start mass dispatch dialog box.</p>
DefaultExcludedCprStatuses		<p>Select the CPR status codes that you want to exclude from the mass dispatch. You can select 80, Inactive, emigrated or 90, Inactive, dead.</p> <p>The status codes that you specify will be shown as default values in the Start mass dispatch dialog box.</p>
BatchSize	200	<p>Specify how many letters you want the Mass dispatch process to send in a batch. The batch size affects performance and the frequency of status updates that are shown in the preview pane in WorkZone Client.</p> <p>You can set the batch size from 0 and up to 5000 letters. If you set the batch size to 0, all letters will be sent at the same time.</p>

Parameter	Default	Description
		A batch size between 200 and 1000 letters is recommended. The default batch size is 200 letters.
